

TOLAR HashNET: Beyond Blockchain Technology

The arrival of blockchain technology introduced many advantages to the world and its potential is huge. However, in recent years blockchain technology also proved to have significant problems. Huge environmental cost, very slow transactions, unmet potential of DAPPS. These problems inspired the founders of TOLAR Hashnet to provide a solution that solves these major shortcomings of blockchain technology, while maintaining all of its advantages. We are proud to announce Tolar. Based on HashNET – a revolutionary beyond blockchain technology. HashNET is scalable, efficient and high-impact decentralised solution to social innovation challenges leveraging Distributed Ledger Technology (DLTs). This revolutionary algorithm features faster transaction time, masternodes and open source, community governed crypto-currency called Tolar.

COTRUGLI Business School is the strategic partner of the project. COTRUGLI is the leading business school in SE Europe with amazing impact and influence in the business community with more than 2,000 MBA Alumni and over 20,000 satisfied clients (leading companies across different industries).

We are pleased to report that Tolar is meeting all goals as set in the Roadmap and also received many positive reviews from leading opinion makers:

- Being featured on ICO Drops , won the Ian Ballina ICO pitch competition in Budapest and received the Beyond Leaders award at the Beyond 4.0 event.
- Tom H. Chase (overall score: 90/100) Diddy Carter (overall score: B+).
- Ian Balina (overall score: 82,23/100) OhHeyMatty (overall score: 87/100)
- Andre Cronje Great fundamental design. I think it can make a real difference in both finality and transaction throughput. All in all, good code, novel design, excited to see where this goes.
- Crypto Rand TOLAR provides a solution that solves major shortcomings of blockchain technology, while maintaining all of its advantages.
- Hacked With a fairly large team, all-star advisors, an MVP, available masternodes, and a growing social media presence, Tolar is another blockchain project that has an excellent chance of doing well this year.

Test net MVP

Maximum speed during the test runs exceeded 150,000 TPS on multiple nodes over all continents, being very close to the ultimate speed that the project aims to reach (200,000 TPS).

Token metrics

Currently, Tolar is in pre-sale and ICO preparation phase (ICO is planned for Q3, 2018.) Private sale is closed and 20.000 ETH soft cap is met.

Hardcap: 45,000 ETH

Pre-ICO price: 1TOL = 0.000120879 ETH for 50+ ETH contribution

1TOL = 0.000131868 ETH for 10+ ETH contribution

ICO price: 1TOL = 0.000145055 ETH
